

Lab 1 CheckIn – Oliver Wuttke (WUTT0019)

Question 1 – Progress

What did you accomplish this week? Any issues slowing down progress?

This week I setup PyTorch on my laptop and did some basic exercises with tensors. Nothing slowing down progress so far, first week so things were pretty light.

Question 2 – Plans

What are your goals for next week? How does this match against your overall project plan?

My group project has not been started yet so my goals for next week would be forming a group and covering the content for that week and possibly brainstorming some ideas for the group project once more information is revealed about it.

Question 3 – Study

List and discuss the three main points of material covered this week.

1. Topic Overview. We covered the topic overview looking at all the different areas of AI we will be covering in this topic and which weeks they are associated with. I'm particularly excited for the search and optimisation topic.
2. Looked at PyTorch, what it is, how to set it up, and how to use tensors in it.

These were the only real things covered this week.

Question 4 – Insights

What was the single most confusing concept (“muddiest point”) for you in this week’s material, and what specific question do you have about it?

I was already familiar with PyTorch and basic tensor operations so I didn’t really have a muddy point this week, but I assume this will change in following weeks.

Question 5 – Linkage

How could one key idea from this week’s material be directly applied to your project?

Not applicable yet.
