

Lab 5 CheckIn – Oliver Wuttke (WUTT0019)

Question 1 – Progress

What did you accomplish this week? Any issues slowing down progress?

Attended the lecture, seminar, and lab. Did all exercises and questions (advanced ones as well). Nothing slowing down progress, but project needs to start making a move.

Question 2 – Plans

What are your goals for next week? How does this match against your overall project plan?

Goals for next week are to have dataset finalised and some EDA done on it in addition to having a clear scope for the A2 part of the project.

Question 3 – Study

List and discuss the three main points of material covered this week.

1. Expert Systems – Looked into how formal logic and rules combined with a knowledge base can be used to create an expert system that gives explainable results but often not optimal.
2. Scoring metrics for ML models – Looked into a variety of scoring metrics for both regression and classification models and how they measure variance, error, and different ratios of TP, TN, FP, FN.
3. AI in health care – Seminar was mainly about AI in healthcare, I found a cool article on how medical researchers train a LASSO logistic regression model to find early stages for cancer and it had great success.

Question 4 – Insights

What was the single most confusing concept (“muddiest point”) for you in this week’s material, and what specific question do you have about it?

I had some confusion around the forward and backward chaining for expert system inference but I had that explained to me in the lecture after I asked.

Question 5 – Linkage

How could one key idea from this week’s material be directly applied to your project?

N/A, project is still in decision stages, but I've got more free time now and so do other group members so more progress can be made.
