

Lab 3 CheckIn – Oliver Wuttke (WUTT0019)

Question 1 – Progress

What did you accomplish this week? Any issues slowing down progress?

This week I completed the lab and questions as per usual, the using K-Means to predict new values was a bit difficult and I had to ask a friend how what the best way was to map clusters to classes. But I vaguely remember doing something similar in my ML and NN class last year.

In terms of the Capstone project, I've formed a group, but we are still deciding on the topic area we want to pursue and what question we want to try and answer.

Question 2 – Plans

What are your goals for next week? How does this match against your overall project plan?

Goals for next week other than watching the content and doing the lab are to really nail down the group project side of things. That being getting the dataset sorted and all that.

Question 3 – Study

List and discuss the three main points of material covered this week.

1. Revisited Alan Turing and his role of importance in theoretical computer science and AI.
2. Capstone project: Looked over all the A1 task sheet and how the project will work.
3. Unsupervised ML in the lab using K-means clustering to identify clusters.

Question 4 – Insights

What was the single most confusing concept (“muddiest point”) for you in this week’s material, and what specific question do you have about it?

The material was mainly just Alan Turing and the capstone project so no real muddiest point.

Question 5 – Linkage

How could one key idea from this week’s material be directly applied to your project?

N/A
