

Lab 4 CheckIn – Oliver Wuttke (WUTT0019)

Question 1 – Progress

What did you accomplish this week? Any issues slowing down progress?

This week I completed the lab activities and questions. We also had group discussions around the group project and switched our topic into predicting when the power grid may be under contention.

Question 2 – Plans

What are your goals for next week? How does this match against your overall project plan?

Next week we would like to have a concrete question for our group project and have our dataset selected and approved. This will serve as the material start of our project.

Question 3 – Study

List and discuss the three main points of material covered this week.

1. Linear Regression
2. Logistic Regression
3. Descriptive Statistics

Question 4 – Insights

What was the single most confusing concept (“muddiest point”) for you in this week’s material, and what specific question do you have about it?

Some of the math behind logistic regression was a bit heavy but it was really cool to see how the coefficients show how much an increase in a unit of that feature will increase the probability.

Question 5 – Linkage

How could one key idea from this week’s material be directly applied to your project?

N/A.
