

Lab 2 CheckIn – Oliver Wuttke (WUTT0019)

Question 1 – Progress

What did you accomplish this week? Any issues slowing down progress?

Completed lab 2 which was just a refresher from stuff in the Neural Networks and Machine Learning topic I took last semester. The only new thing was using graphviz to visualise the decision trees, we used a different module in the NN and ML topic to visualise trees, so it was fun learning this new one. Nothing really slowed down progress other than it being a bit of a pain to find where brew keeps packages installed on mac but it's honestly good to know for future reference.

Question 2 – Plans

What are your goals for next week? How does this match against your overall project plan?

Once more information is released about the project then I'll be able to start planning it better.

Question 3 – Study

List and discuss the three main points of material covered this week.

This week we covered intelligent systems and agents with the three focus areas being:

1. Software Agents. We looked at different types of software agents from web browsers to malware. Understanding how these types of agents assist humans with their respective tasks and the limitation of these often-narrow scoped agents.
2. Narrow/Weak AI vs General/AGI. Looked into the difference between narrow AI and AGI. Narrow AI being the types of AI like machine learning which is designed to do a small subset of tasks. AGI being a broad general model capable of a large range of general-purpose tasks.
3. What is Intelligence ? Finished off a bit philosophical with a look into what intelligence is and how can we distinguish between human and artificial intelligence. What classifies as intelligence seemed to be a bit broad but the distinguishing question is very interesting and I think it also may be linked to the reason why we don't have 'AGI'.

Question 4 – Insights

What was the single most confusing concept (“muddiest point”) for you in this week’s material, and what specific question do you have about it?

Nothing this week was too hard or confusing the lab exercises and questions were stuff I’ve already done and the lecture content was somewhat new but nothing too crazy.

Question 5 – Linkage

How could one key idea from this week’s material be directly applied to your project?

N/A
