Lab 8 CheckIn – Oliver Wuttke (WUTT0019)

Question 1 – Progress

What did you accomplish this week? Any issues slowing down progress?

Submitted my A1 assignment on time (as expected). Was pretty happy with the report and code, video was a bit low quality. but it covered what was needed. Nothing really slowing down progress this week ☺.

Question 2 – Plans

What are your goals for next week? How does this match against your overall project plan?

Complete lab 8 which I've done now at the time of writing this. I also want to start a notebook looking into some machine learning on the dataset for A2. This would align well with model selection and fine tuning for the overall project plan.

Question 3 – Study

List and discuss the three main points of material covered this week.

1. Intro to Prolog in the lab – We looked at prolog in the lab this week and coded up a simple knowledge base for the Panthera genus.
2. Looked into Lean the programming language in the seminar – Very cool programming language used to verify the validity of mathematical proofs. Looked into how it works under the hood and compared it to a modern AI enhanced version by google.
3. NLP lecture content – Looked into natural language processing in the lecture mainly covered from a high-level overview no implementation details.

Question 4 – Insights

What was the single most confusing concept ("muddiest point") for you in this week's material, and what specific question do you have about it?

Definitely the NLP stuff I know that LLM's use transformers and vectors to process natural language would be cool to know the math behind it.

Question 5 – Linkage

How could one key idea from this week's material be directly applied to your project?

Prolog 100% as its needed for A2 in the hybrid AI system.
